Onshore wind energy – pillar of the energy transition

The **future prospects** for onshore wind energy have never been better. Without a massive expansion of onshore wind energy, the energy transition cannot be achieved:

- **Decarbonisation** – The envisaged climate neutrality requires far-reaching electrification in transport, heat supply and industry. To achieve this, onshore wind energy must be massively expanded.
- **Ukraine war and energy crisis** – Russia's war of aggression against Ukraine not only violates international law but has also highlighted the very real risks of an energy shortage and resulting **high electricity prices**. Investments in new renewable energies, and onshore wind energy in particular, are therefore of paramount importance for the energy supply.
- **Favourable regulatory environment** – The EEG provides for **ambitious expansion targets** with expansion rates of up to 8 GW per year and thus sets **new incentives** for the urgently needed expansion. The German government has announced that further bureaucratic and permitting obstacles will be removed by 2023.
- **Lack of land and approval procedures** – Measures to **accelerate permitting procedures** by waiving environmental impact and species protection assessments and the targeted **designation of 2 % of Germany** for onshore wind energy should further reduce known hindrances to the expansion.
- **Acceptance** – Citizen participation models bring **economic benefits** and thus increase **acceptance for the expansion** of renewable energies among the (local) population.

A team of experts...

Energy industry group. Luther’s Energy team consists of over 45 experienced experts who offer full-service legal and tax advice on all energy issues to energy suppliers, project developers, industrial companies, financial investors as well as the public sector. The experts from Luther’s Energy team can provide you with top-quality advice throughout the value chain, be it on projects regarding the production and generation of conventional or renewable energy, on infrastructure such as energy supply networks or storage facilities, on concession procedures, on financing or M&A transactions, on energy trading and the distribution of energy or on contracting projects. Due to our wealth of experience in the energy sector, we have first-class knowledge of the industry and also expertise in technical and economic matters. In particularly complex projects, we use specialists to handle project management tasks. We are also well-known for our special expertise in dealing with legal disputes all the way to the highest courts, and in arbitration proceedings. Internationally, we work closely with leading law firms who, like us, focus on providing comprehensive advice in the energy sector.

Expertise

Excellent legal knowledge is our trademark. Many years of experience and good relationships with market participants and authorities help to provide correct assessments.

Interdisciplinary

Our team of lawyers and tax advisors is closely connected in the market with technical and economic advisors. When things get complex and difficult, we know who to rely on.

Innovative

Innovation topics are an important part of our daily work. We are looking for challenges where solutions are not readily available.

Future-oriented

We are constantly monitoring legislation on the improvement the framework conditions for onshore wind projects. We closely observe new models of electricity marketing and use, as well as research and development in the wind sector.

Excellence

Considered a leader in the energy sector by JUVE, Legal 500 and Chambers for many years because our team boasts a large number of outstanding legal personalities and expertise in all major legal matters.
