Luther.Artificial.Intelligence

Artificial intelligence (AI) is a driving force in digital transformation. It facilitates machine learning and the automation of intelligent behaviour in an extraordinary way, paving the way for new services or even new business models in companies and industries. With Luther.Artificial Intelligence, we can develop innovative solutions using AI to analyse mass information or mass documents, link them intelligently and incorporate them into business processes.

We combine legal expertise, a holistic process model, proven tools and experienced solution partners to jointly develop complex legal services or innovative functional enhancements in line with user requirements through the use of AI systems. We combine business requirements and technology in a proven process model to create a new or improved, innovative business process.

Our Services:

- Performing a structured analysis of the (legal) task, including analysing the potential for using AI
- Developing solutions using AI technology
- Identifying, defining and structuring the relevant sources of data
- Selecting and collecting training data
- Training the algorithms by way of machine learning
- Designing and developing the user interfaces (UIs)
- Transferring the training model to the production environment and connecting it to the UI
- Providing user training and completing the handover for the go-live

The described service components are generally defined in more detail in moderated workshops that are attended by the business areas involved, lawyers from Luther and our digital and process experts.
